

Turfgrass Maintenance Predicting the Probability of a Freeze

**Tom Samples, Professor, and John Sorochan, Associate Professor
Plant Sciences**

Freeze probabilities have been developed based on weather data recorded at 43 sites across Tennessee from 1921 through 1950. Air temperature at each location was measured by thermometer about 4½ feet above ground in a weather instrument shelter. This information may be particularly helpful as turfgrass managers schedule fertilizer and pesticide applications in spring and fall.

Using the freeze probability information.

Probabilities are intended to describe average conditions across the state. The listed probability of a spring freeze (32 degrees Fahrenheit)

occurring at Bristol on or after April 2 is 90 percent (e.g., the odds of a spring freeze on or after April 2 are 9 to 1). Similarly, the listed probability of a fall freeze (32 degrees Fahrenheit)

Frost Pattern on Common Bermudagrass

occurring in Dickson on or before October 23 is 50 percent (e.g., the odds of a fall freeze on or before October 23 are 1-to-1).

The probability of freezing temperatures (32 degrees Fahrenheit) on or after indicated dates.^a

Station	Probability (%) - Spring				
	90	75	50	25	10
Ashwood	Mar. 26	Apr. 1	Apr. 8	Apr. 15	Apr. 21
Bolivar	Mar. 12	Mar. 22	Apr. 3	Apr. 15	Apr. 25
Bristol	Apr. 2	Apr. 8	Apr. 16	Apr. 24	May 1
Brownsville	Mar. 11	Mar. 19	Mar. 28	Apr. 5	Apr. 13
Carthage	Mar. 20	Mar. 29	Apr. 7	Apr. 16	Apr. 25
Chattanooga Airport	Mar. 9	Mar. 17	Mar. 26	Apr. 4	Apr. 12

Station	Probability (%) - Spring				
	90	75	50	25	10
Clarksville	Mar. 19	Mar. 27	Apr. 4	Apr. 12	Apr. 20
Coldwater	Mar. 27	Apr. 3	Apr. 11	Apr. 19	Apr. 26
Copperhill	Mar. 28	Apr. 4	Apr. 11	Apr. 18	Apr. 24
